- Also published other 10 theses on China Copyright, Competition Policy Review, IP Law Study, etc.

## Research Interest & Ongoing Project

- **Research Interest:** IP Law & AI, Data Protection, Law & Economics, Competition Law
- **Ongoing Project:** The Possibilities of Creating a New Kind of Intellectual Property Right for Big Data (arguing that for the time being, there is no need to create a new IPR for big data because of no lack of incentive in the current big data industry, but when taking into consideration the need of data sharing and free flow of data, we may find it necessary to do so, or the industry will suffer from market failure resulting from the nature of data as public goods)
